

# Sam & Lauren wedding website: Figma design frames

2026-09-17 · @Someone

Seven pages are designed at desktop and mobile in the Wedding Figma file, alongside the logo, favicon and Open Graph image, with two sections still to design. Companion to [Doc](#).

## Design frames

Fourteen frames, one desktop and one mobile per page, all in the [Wedding Figma file](#).

| Page     | Route          | Desktop                          | Mobile                          |
|----------|----------------|----------------------------------|---------------------------------|
| Homepage | /              | <a href="#">Homepage desktop</a> | <a href="#">Homepage mobile</a> |
| Player   | /sam , /lauren | <a href="#">Player desktop</a>   | <a href="#">Player mobile</a>   |
| Planner  | /weekend       | <a href="#">Planner desktop</a>  | <a href="#">Planner mobile</a>  |
| Stay     | /stay          | <a href="#">Stay desktop</a>     | <a href="#">Stay mobile</a>     |
| RSVP     | /rsvp          | <a href="#">RSVP desktop</a>     | <a href="#">RSVP mobile</a>     |
| Lodge    | /the-lodge     | <a href="#">Lodge desktop</a>    | <a href="#">Lodge mobile</a>    |
| FAQ      | /faq           | <a href="#">FAQ desktop</a>      | <a href="#">FAQ mobile</a>      |

The brief calls the schedule page "The Weekend"; it's designed as "Planner". The brief's [/kids](#) page has no frame yet, so nanny details could live on Planner or Stay instead.

## Brand assets

Three single-frame assets used across the site and in link previews.

| Asset   | Frame                   | Used for                                                                                   |
|---------|-------------------------|--------------------------------------------------------------------------------------------|
| Logo    | <a href="#">Logo</a>    | Nav and footer; export as SVG                                                              |
| Favicon | <a href="#">Favicon</a> | Browser tab and home screen; export as SVG plus 180×180 PNG for <a href="#">apple-icon</a> |

| Asset            | Frame                            | Used for                                                                                             |
|------------------|----------------------------------|------------------------------------------------------------------------------------------------------|
| Open Graph image | <a href="#">Open Graph image</a> | Link previews in messages and social; export as 1200×630 PNG or JPG for <code>opengraph-image</code> |

In the Next.js App Router, placing `icon.svg`, `apple-icon.png` and `opengraph-image.png` in `app/` generates the metadata tags automatically.

## Missing from the design

Two reusable sections still need desktop and mobile designs before the build.

| Section        | Where it's likely used                                              | What the design needs to cover                                                                                                                                      |
|----------------|---------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full-width map | Lodge, Planner, FAQ (getting there)                                 | Edge-to-edge map of The Lodge Jamberoo, pin and address, "Get directions" link, map styling that fits the palette, and a static image fallback for slow connections |
| Rich text      | Stay (contribution copy), FAQ answers, player bios, general content | Heading levels, body, links, bold, bulleted and numbered lists, pull quote, inline image, and max line length at desktop and mobile                                 |

- ☐ Design the full-width map section (desktop and mobile)
- ☐ Design the rich text section (desktop and mobile)
- ☐ Decide where the Kids content lives, or add a Kids frame
